

BRANCH OF GOVERNMENT RENOVATES MEDICAL CENTER

Mobile Modular delivers a robust yet cost-effective modular medical facility.

THE CHALLENGE

A government branch is renovating a medical center in Augusta, GA. A construction firm was awarded the task order, but revisions to the center's 12th floor required expedited completion of select finished medical facilities. Mobile Modular was contracted to provide modular office space for the center's staff. The client requested a new building that could serve as fully functional medical facilities and efficient general office space with 20 offices and a fully equipped gym. While the 12th floor was being renovated, the staff needed to be temporarily relocated to a suitable modular workspace.

THE SOLUTION

Mobile Modular's Mid-Atlantic team worked closely with the construction firm to create a modular hospital building covering 9,000 square feet to be used as medical facilities and office space during the renovation.

Early incorporation of this flexible, modular building design enabled Mobile Modular to save a tremendous amount of resources during a demanding renovation project. By being available and responsive to the customer at all times, Mobile Modular's team was able to complete the new energy-efficient building while exceeding the expectations of even the client.
