

# MECOSTA COUNTY'S EFFICIENT MODULAR MRI UPGRADE

Mecosta County Medical Center upgrades to a fixed MRI with a modular addition that fits the site, aligns with the architecture, and minimizes disruption.

## THE CHALLENGE

Mecosta County Medical Center (MCMC) was utilizing a mobile MRI that attached to a loading bay adjacent to the imaging wing of the medical center. Due to increases in physician utilization and patient volume, Mecosta believed that an upgrade to a fixed, in-house unit was in the best interest of their patients. After the State of Michigan granted the Certificate of Need for the permanent unit, MCMC faced a difficult project, due to site restrictions and budget constraints. The design had to maintain a cohesive architectural aesthetic with the existing campus, the placement had to fit within the available footprint, and the construction had to be carried out in a manner that did not disrupt daily medical operations.

**Customer Name:** Mecosta County Medical Center

**Project Location:** Big Rapids, MI

**Building Type(s):** Modular Healthcare

**Job Type:** Permanent

**Total Sq. Ft:** 725 sq. ft.

## THE SOLUTION

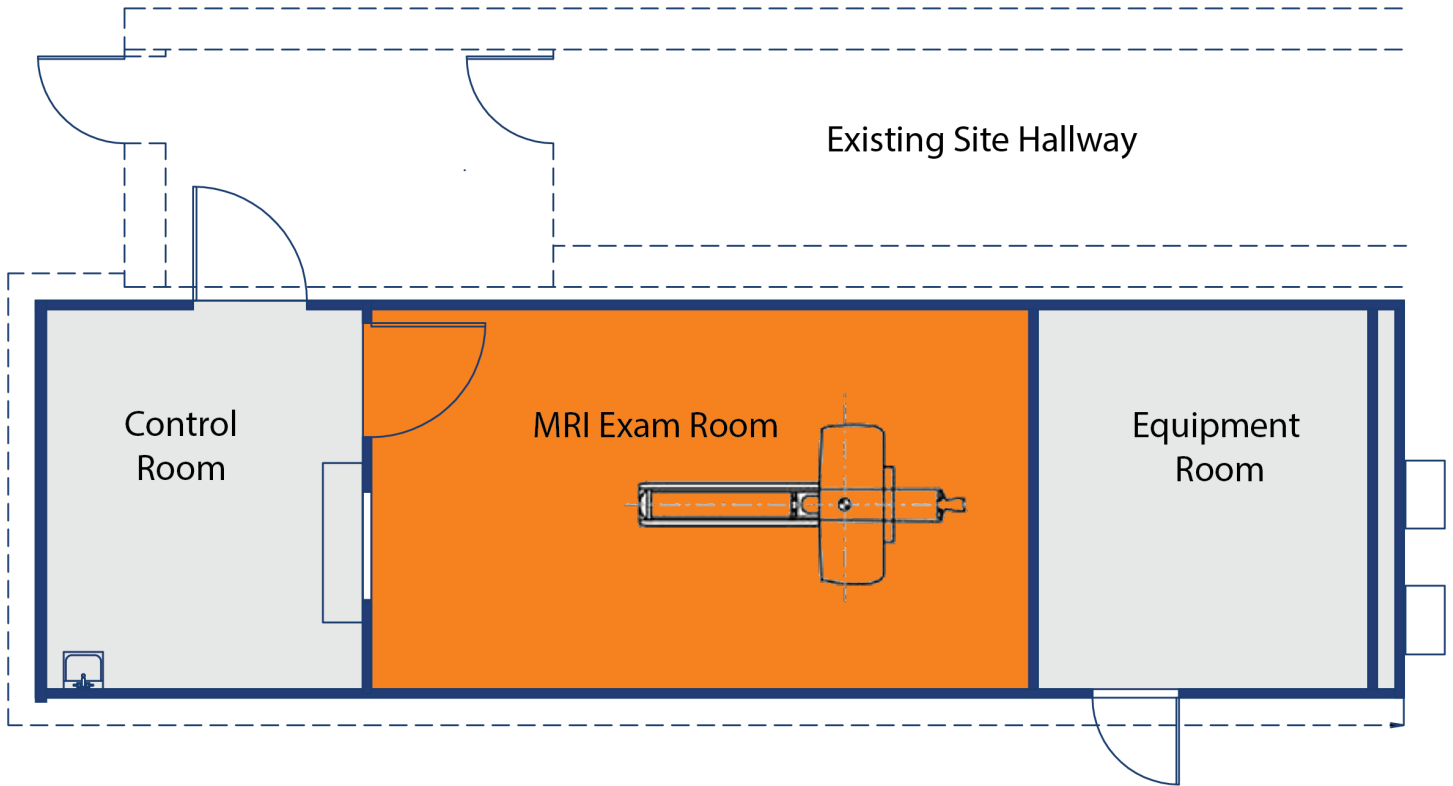

MCMC chose Mobile Modular for their expertise and proposed solution, which involved a single modular building for the MRI, seamlessly connected to the existing walkway. The modular building's three-tone brick exterior blends well with the medical center. This approach allowed MCMC to use existing infrastructure and minimized operational disruptions. Modular construction also sped up the project, with the MRI installed within days and the entire project finished in under three months. The new MRI is now a valuable asset for MCMC and their community.
