

# MILLER FAMILY HEALTHCARE

Mobile Modular provided a small-town medical practice with a permanent new facility complete with all the necessary amenities.

## THE CHALLENGE

In Moorefield, WV, Miller Family Healthcare needed a new healthcare building due to outgrowing their old space. Mobile Modular worked closely with them to design a 56'x70' modular clinic, fostering a strong customer relationship through open communication and multiple site visits.

## THE SOLUTION

Mobile Modular designed a floorplan layout for a healthcare building with offices, exam rooms, labs, and a spacious waiting area. After the building's delivery and customer crane setup, the remaining installation was completed in just two days. To enhance its appearance and integration within the community, site-installed features like Hardie-Board siding, a mansard roof, and a retaining wall for handicapped accessibility were added. The project was celebrated with a Chamber of Commerce blue-ribbon cutting ceremony, marking the town's new healthcare facility.
